

MA18 Headphone Volume Control

High Definition adapter will add a headphone jack with its own volume control to any amp that lacks a provision for headphones.

- Connects to speaker outputs (speaker outputs on amp to QED unit to speakers)
- Automatically switches speakers OFF when a headphone jack is inserted
- Control headphone volume
- Silver plated switch contacts
- Bananas plugs required

MA19 System Switch Unit

Featuring large connections for thicker cables, this box enables you to switch amplifiers on a single set of speakers without having to rewire your hifi every time! Can be used between a hifi system and a television or two amplifiers.

MA20 2-Way Input Expander

Allows you to add an extra line level input.

MA29 2-Way Tape Switching Unit

Enables two recording devices (Tape, MD, CD-R, DAT etc) to be connected to a single tape in and out loop. Allows playback and recording from either source as well as having a tape to tape facility.

MA31 Record Player / Compact Disc Switch

Record Player / Compact Disc (or Auxiliary) Input Switch

MB40 Three-Way Tape Switching Unit

Connect any combination of three tape decks, MD recorders, CD recorders or DAT units to a single tape loop and listen to, record to and copy between any combination you desire!
Features gold-plated phono sockets for the best connections.

MB41 Six-Way Input Expander

As well as giving you five extra inputs, this box will provide an extra tape loop too! Features gold-plated connections for the best signal transfer.
